

Pring Turner Performance

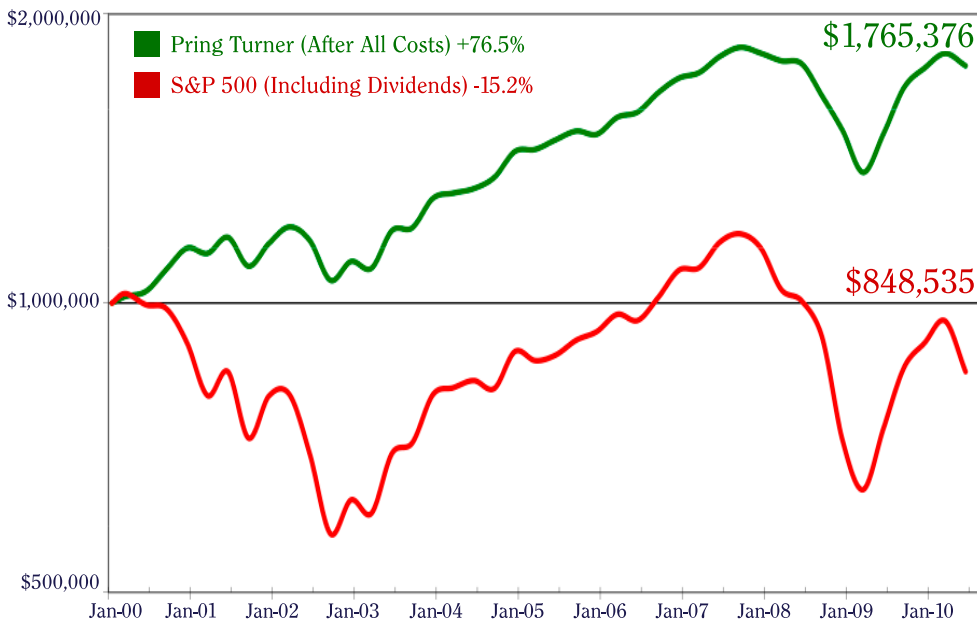

» Protecting Clients' Valuable Assets

Our conservative investment style stresses preservation of capital, income, and growth to attain superior returns with low risk through both good and bad market cycles. Since 2000, a lengthy period of stock market under-performance has been in effect. Compare our results to the total return of the S&P 500 during the same extremely difficult time frame. We are especially pleased to achieve this performance while reducing client portfolio risk to roughly half the stock market risk. No matter what challenges lie ahead we look forward to continue helping conservative investors protect and grow their wealth.

Pring Turner vs. S&P 500

January 2000 - June 2010
